Title:

Comments: These elk herds need this supplement feeding, by ending the feed grounds it may reduce elk by 80% because of starvation. These elk have come accustomed to this behavior in order to survive, by failing to continue it would be disastrous to elk populations in this area of the state. I know disease is a concern but disease will cause much less die off than starvation. These grounds are important and I have my full confidence in the Wyoming Game and Fish Department to ensure the feedgrounds are run in the best possible way to reduce impact to wildlife and to the public and other industries
