Comments: I was deeply disappointed that the NPCWNF Plan failed to adequately protect the area known as the Great Burn. Allowing motorized use and over snow use in the area will certainly result in motorized abuse in the Great Burn WSA. Decades of evidence bares this out. Where ever motorized use is allowed, it is abused in the surrounding area. Furthermore this area is home to the few remaining mountain goats of the range and more pressure will negatively affect them. The area should be treated and cherished for what it is-a gem of mountain ecosystem, wildlife habitat and a last bit of wildness in an otherwise roaded and and battered landscape.
