Title:

Comments: Rock climbing on some of the most legendary walls, such as El Capitan, will be made impossible if climbers are unable to replace fixed anchors. It will lead to horrendous, preventable injuries, as well as decline in mental health for many of the participants who find peace and happiness in the vertical terrain.

Please, do not add any more limitations on replacement, as well as placement of anchors. It has not been a problem, I don't see why it is even on the table. Rock climbing in Yosemite is part of its rich history.
