Comments: Bolts need to be able to be placed in the wilderness and fix anchors. There has been a tradition of climbing in the United States for a long time. Anchors are used throughout the world for climbing. There are bolts and anchors in Switzerland and France. Without the ability to replace old bolts for safety it will end climbing in the United States. People will start trying to climb old routes that are unsafe because the bolts are too old and they will get hurt. Bolts and fix anchors also help in rescue situations so it will also Hinder rescue operations.
