Comments: Thank you for allowing comment. I graduated years ago from the University of Idaho with a degree in Wildlife Resource Management. In the face of the onshot of Chronic Wasting Disease I cannot condone the feeding program as acceptable management policy. I strongly support a reduced feeding program that will encourage dispersal of elk winter and summer while diminishing the opportunity for spread of disease. Prudent management for the benefit of wildlife welfare over tourism or some other goal should be the path of professional wildlife managers. Please implement a program that will reduce feeding in a short time period to zero feeding. I appreciate you considering my comments and your efforts to support the welfare of our wildlife.
