Title:

Comments: We - all of us called humans - cannot exist without the breathable air and drinkable water that only mature and old-growth forests can provide...and those forests have almost disappeared in my extremely short lifetime! When mature and old-growth forests are gone, humanity will suffer from lack of abundant water, food and air. The only reason humans survive today is because of millions of years of forest evolution.

Public lands are my lands and must be protected at all costs to make sure future generations don't suffer from a few short decades of clearcuts in the name of revenue, and only revenue. President Biden's Executive Order must be legally enforced. Mature and old-growth forests must have legal protections in perpetuity.

Clearcuts should never have been allowed to take place on any landscape scale, and especially on public lands. My public lands should never be put up for sale at any price or any reason.

Please, for the climate, for the next generations, for water, air and food - let our mature and old-growth forests do their job for us.

Thank you for doing your job by legally protecting mature and old-growth forests.
