First name: Virginia M.

Last name: Haver

Organization:

Title:

Comments: Two points:

1. Be sure to preserve old growth and mature forests in your planning. They provide resilience for climate change (a major concern of mine) and also provide recreational opportunities (another passion of mine is hiking).

2. Consider the impact of climate change in your planning and the impact that has on recreational opportunities. Make forest lands more resilient to minimize wildfires, and minimize loss or damage of whole ecosystems, including wildlife, fish, flora and water quality.
