Comments: Hi, please reconsider the efforts to ban fixed climbing protection, of all kinds, from Wilderness areas. I'm a climber and a registered voter, and this issue is important to me. Safe and accessible climbing in designated wilderness area allows for us to enjoy these wilderness areas and develop connections with these spaces to further engrain the importance to protect these spaces from actual threats like development, industry use, and the effects of climate change. The climbing community as a whole is strongly invested in the preservation of wilderness. If people don't connect with these spaces personally, they won't step up to greater threats when it matters most.
