Comments: Please uphold the Wilderness Act by keeping fixed anchors out of Wilderness!

Rock climbing without permanent fixed anchors is generally compatible with wilderness preservation. Using removable protection like slings and chocks is also generally compatible. But permanent fixed climbing anchors, like bolts and pitons permanently pounded into Wilderness rock faces, diminish an area's wild character. Not only are such installations lasting signs of human development, but they also attract and concentrate use-at great expense to native plants and animals for whom Wilderness is often a last, safe refuge.

Climbing without permanent fixed anchors is generally compatible with wilderness preservation. While it may be true that fewer people will climb certain routes in Wilderness if they don't have fixed bolts or other permanently-installed protection, natural limits on use is not a bad thing when it comes to wilderness protection, particularly with the recent explosion of outdoor recreation uses in Wilderness.
