Title:

Comments: Permanent fixtures in wilderness areas isolate public intrusion into wilderness areas and there by decrease nature's resilience in these areas as well as interfere with animal habitat and usage. Isn't Wilderness areas just that because it is there to preserve the natural order of things and any permanent human intrusion no matter how small or large from climbing apparatuses, rails, tracks, roads, streets, or highways defeats the purpose of Wilderness areas, period! The Wilderness Act is specific for a reason!
