Comments: We as sportsman do not support the management of old growth forests. The national forests are already not following their management plans in the amount of early successional habitat as it is. Managing for more old growth forests will be the nail in the coffin for many species that depend on early successional habitat. I am very disappointed in this executive order and current management plans. As an avid grouse hunter I feel my hunts are number due to your management and I will never be able to pass this on to my kids and grandkids
