First name: Caleb

Last name: Pollack

Organization:

Title:

Comments: Please do not allow permanent fixed anchors to be used on rock climbing faces. Bolts and other fixed anchors permanently reduce the wild character of a rock face, and attract and concentrate use-at great expense to native plants and animals for whom wild areas are the last, safe refuge. Climbing without permanent fixed devices does not impact wilderness preservation. Climbers wanting to use fixed anchors have plenty of opportunities outside of Wilderness areas.
