Comments: As you move forward with the nationwide amendment to create consistent management direction for old growth forests and other forest types, please consider these important comments to advance healthy forests on our public lands.

\* Promote forest diversity and recognize that forests are dynamic. Young, middle-aged, and old forests across landscapes provide habitat for multiple species and their life cycle needs. To do so, we must view forests as dynamic collections of important seral states. Forests are healthiest when varying forest ages are interspersed across landscapes, from young forests to old growth.

\* There is broad agreement that active forest management is necessary to reduce risks posed by wildfire, optimize carbon outcomes, improve wildlife habitat, safely restore fire to fire-adapted forests, and restore impaired ecosystems. The challenge is how to manage these landscapes at the scope and scale that will address the increasing need.

\* The Forest Service must conduct more vegetation management on larger geographic scales to restore forest health and promote resilience, which includes an ecologically appropriate abundance and distribution of mature and old growth forests where those traits are lacking.

\* The old growth inventory and analysis of threats completed by the USFS found that mortality from wildfires is currently the leading threat to mature and old growth forests, followed by insects and disease. I support management efforts that focus on science-based restoration and wildfire treatments to reduce the risk of catastrophic wildfire in mature and old growth as well as other forest types.

With all of this in mind, living in the Tongass Nation Forest, I believe I am uniquely qualified to speak to the devastation that clear-cut logging has on forests. I would like to see the USFS be responsible for their lands and insist on selective logging, as well as the logging companies to be held responsible for the cleanup of their zones. Living on Prince of Wales Island, I am not naive to the resource exploitation that is swept under the rug here, out of the public view. I would like to see some accountability and behavior that exhibits knowledge of and respect for the resource.
