Comments: Hello. We should always protect our monuments and all of our public lands. More importantly here is keeping logging off of our public lands. We need to protect. Our forests but now especially our old growth forests. They provide so much to people and losing them will throw off climate and water absorption, erosion, helping absorb carbon and more! They are home to many wild animals and flora and fauna that is important to the environment that sustains us. The south seems to have lost much of their old growth forests. Please save this one and ban logging permanently!
