Comments: The proposed policy change would erase current climbing and canyoneering routes as well as prevent new ones from being created. This would completely change recreation in many of the National Parks and Forests and not in a positive manner. This change would jeopardize climbing and canyoneering recreation completely. Canyoneering and Climbing is how my appreciation and love for nature and the Earth was strengthened in a way I did not previously know was possible, and what made me so passionate for protecting the natural beauty of our planet, but this act would prevent others from learning and experiencing like I and so many others have and hope to continue.
