Comments: Rock climbing provides a fantastic and unique opportunity for recreating in the outdoors. As someone who has taken part in the activity for over 9 years, it has provided both a physical and mental challenge that has had a very positive effect on my life. Fixed anchors are an important part of the system for rock climbing. They provide a safe and efficient means to ascend and descend a rock face with minimal impact on the environment. Please do not prohibit the use of fixed anchors in America's wilderness areas. Thank you.
