Title:

Comments: I support amending the NWFP to include considerations of indigenous management techniques, in order to improve fire resilience and to increase diversity of landscapes and forest maturity in the Forests. However, I want to voice my support for continued access to forest lands for all uses consistent with the goals of the NWFP, including motorized uses (motorcycles, snowmobiles, etc.). The long-term economic sustainability of the communities dependent the forests requires a strong recreational use. Motorized uses are consistent with the goals of the NWFP, and this update should not be used as a pretext to further reduce or restrict access to public lands for any valid recreational use.
