Comments: Specific issues I would like included in the revised NWFP analysis include considering the Recreational Special Permit Cabin program, encouraging its continued participation ... not trying to eliminate the existing cabins. Also, allowing grants or assistance to cabin permit holders for making their cabins & lots more fire resilient, providing support to keep the access roads in good condition for fire equipment access. I would also like more encouragement for forest visitors, more trails, maintenance of current trails, campgrounds and access.

I would like the analysis to consider the impacts on updated land management plans related to watershed functionality, threatened and endangered species, and most importantly fuels/wildfire management ... with an emphasis on fuels reduction with minimal reduction of native trees and vegetation. My first priority is to create a plan that protects the forest while maintaining the current Special Recreational Cabin Permit program functional with a healthy budget to support permit holders. I am a permit holder in the Lassen National Forest, Feather River Tract, lot 20.
