Comments: Today I would like to express my opinions during this comment period regarding the much needed future of the Land Management Plan Direction for Old-Growth Forest Conditions Across the National Forest System #65356.

What might happen with a NEW PRESIDENT?

Are you able to defend these management plans durability, protecting our forests and wildlands then?

Please consider the effects of CLIMATE CHANGE occurring now which looks to be our future. The risks of intense, wide spread, rapid moving, forest fires destruction & death to trees, wildlife and humans.

Continued concern to protect old growth CONSERVATION is essential.

You MUST include all local TRIBAL INPUT on everything, that goes without question!

Living RURALLY and close to a large national forest we / I often feel left out of considerations, not a good practice to ignore the little people.

Thank you for listening, I hope you will follow thru with ALL my concerns.
