Comments: To Whom It May Concern,

As part of the public input process I suggest the following changes in the amendment to the Northwest Forest Plan: 1) End all commercial logging on National Forest lands within its jurisdiction; 2) Thinning and fuel reduction should be restricted to around houses and communities and wherever possible incorporate Native American practices in fire control and thinning; 3) a primary objective must provide for biodiversity habitat; 4) retool current forest economy based on extraction by replacing it with ecological restoration of riparian and planted areas focusing more recreation.
