Title:

Comments: Re. the NP-Clearwater Forest Plan: I strongly object to

--the weak standards for old-growth

--the sharp increase in logging throughout the forests. it is not in the national interest to reduce the forests capacity to sequester carbon and to increase the release of CO2 through logging and road building

--the reduced protection offered by stream buffers

These are not only problems as we all face the consequences of climate change, but damage our valuable tourism economy in Western Montana and North Central Idaho.
