Comments: Hi, ASA climber since 18 years, I'd like to say how important is the use of fixed protections in our sport.

It's not just a tool but it's something absolutely essential to guarantee our safety when we are out there.

Without those protections many many climbers will not enjoy those places and that leads to an increase of degrade of the area due to the lost of interest of the places itself.

This would also affect all the commercial activities of those areas, where we usually buy stuff, food and pay for accomodations.

Please don't do such a big mistake, we love our mountains and we want just to be able to explore the nature with the highest level of security possibile.

With respect,

Davide
