First name: Bones

Last name: Rangel

Organization:

Title:

Comments: We should use the energy, efforts and resources that we all have to promote bolting education and leave no trace ethics. Not preventing bolts to maintained or placed safety. This will only create rogue bolters and tensions between climbers and government protected land. Did we not learn anything from the alcohol prohibition. Telling people they can't do something will only create underground ways of doing the thing. Vs trying to find a way to co create outdoor spaces that serve everyone and keep wildlife and nature preserved and maintained for everyone. Rapture closures, and rock quality maintenance are valid concerns but should be enforced in other ways. There are people out there trying very hard to help others make smart and correct Choices when it comes to climbing and bolting. This will only create unsafe and tumultuous tensions between land and climbers.
