Comments: HI

I'm told that efforts are being made to restrict the placement of climbing bolts.

I am a new climber and have not been involved in any of the debate thus far.

Two very important points. Bolts make climbing a LOT safer, especially for those of us who are new to it.

Secondly, bolts are virtually invisible. It is usually a bit of work to locate them on crags. They are not some eyesore than anyone who isn't a climber would notice. Please don't restrict their use.

Thanks
