Title:

Comments: Fixed anchors are an essential piece of rope access users' safety system and are not prohibited "installations" under the Wilderness Act. Following existing climbing policies that allow judicious use of fixed anchors for more than a half century will do more to protect Wilderness character while providing for primitive and unconfined Wilderness climbing.

It is unreasonable for federal agencies to create new guidance policies prohibiting Wilderness fixed anchors across the country when they have allowed, managed, and authorized fixed anchors for decades.

Prohibiting fixed anchors will create safety issues by imposing unnecessary obstacles to the regular maintenance of fixed anchors, a responsibility undertaken by the climbing and other rope access communities. Critical safety decisions often must be made in the moment and any authorization process should not impede those decisions. Fixed anchor maintenance needs to be managed in a way that incentivizes safe anchor replacement and does not risk the removal of climbing and other rope access routes.

Prohibiting fixed anchors obstructs appropriate exploration of Wilderness areas. Land managers need to allow rope access users to explore Wilderness in a way that permits in-the-moment decisions that are necessary when navigating complex vertical terrain.

Prohibiting fixed anchors will threaten America's rich climbing and rope access legacy and could erase some of the world's greatest rope access achievements. Rope access management policy needs to protect existing routes from removal.

Restricting the establishment of new routes to "existing climbing opportunities" on non-Wilderness lands is unenforceable and will create confusion amongst land managers and rope access users. Non-Wilderness rope access management policy should maintain opportunities for new anchors unless and until analyses determine rope access should be restricted to protect cultural and natural resources.
