Comments: I am writing this out of concern and if you are also concerned, please inform others or if you have any influence!

Our Government or another Country is killing off our ecosystem!

Take a look around...Hardly any Birds, Butterflies, Moths, Frogs, House Flies, Crickets, Mosquitoes, Ants, etc.

Five years ago, I could not sit on my back porch without being eaten alive by mosquitoes. I have woods behind my house so it doesn't make sense... that Frogs, House Flies, Crickets, Mosquitoes, Ants, Birds are dying off..

(Due to Global Warming) because they thrive in heat!

North America lost 3 billion birds (Audubon Society)

The Government claims there are no "Chem Trails" but when the whole of the USA has no Bugs or very few left even in isolated - remote places; they cannot continue to blame the extinction of our ecosystem on Global Warming along!

Please help our communities to be Pesticide Free!

Let Congress know and your community know that the basic life forms are being killed off.

www.BeyondPesticides.org shows a list of pesticides are causing health problems as our children grow!
