Title:

Comments: We are very concerned about the preservation and management of all US Forests and wild areas. Preserving old growth forests should be a priority not only for the health of our planet and ecosystem but for our children and their future as well.

As the owners of 40 acres of timber in Oregon - we are on board with doing our part with conservation and hope to help protect the future of forests (especially old growth forest because there is so little left) for our country.
