Title:

Comments: We are well advanced in the sixth great extinction. Our mission should be to support the environment and work to protect our forests and waters against climate change any way we can.

Making our forests less vulnerable to forest fires by controlled burns and the knocking down of excessive undergrowth and restoring riparian environments to have colder streams and letting the ungulates be controlled by predators must be our goals. Naturally, the banning of toxic chemicals in all areas of our state and national parks and forests is a given. Thank you
