Comments: Northwest Forest Plan Amendment: NFH Public Comment

February 2, 2024

This comment is submitted on behalf of the Salt Creek Summer Homes Association, which represents 47 special use permittees in the Salt Creek Recreation Residence tract on the Shasta-Trinity National Forest.

As Forest Service Special Use Permittees, we are stakeholders in the development and implementation of all plans that strive toward increasing and maintaining a healthy Shasta-Trinity National Forest. Many of the cabin families in our tract are multi-generational and possess strong bond to the land and ties with our local communities.

Of particular interest are amendments to the plan that apply up-to-date climate and forest health science to inform plans for creating a more fire resilient Shasta-Trinity National Forest. Additionally, we ask that the Plan Amendment provide a framework that establishes enforceable standards for timely planning and implementation of fuels reduction and management projects - from planning to project completion - and includes direct notification to permitholders at their address of record with the Forest Service Special Uses.
