Comments: Now that I have my subjective comments given in another post let's talk about objective data with this closure because I have some questions....

What data supports we need a closure specifically for granite mountain?

Has there been any documented destruction of lands from snowmobiling and other recreational activities that occur on granite mountain?

What do we as Idaho citizens or the general population gain following a closure of granite mountain?

What do we lose as a population after a closure of granite mountain takes place? (If you didn't already know, we lose a lot)

With the seasonal closure in place for cat skiing what data supports we should even have that closure? Are motorized snow users causing destruction to the land or is it money and politics that have driven cat skiing operations private access to all of granite mountain? I would love to see the reason why the first closure is in place....

Who wants this area closed off? What is the big picture here and why is it affecting me and the PUBLIC LAND I am rightfully allowed to recreate on?

Lots of questions I have and no data to support this closure that I have seen yet.
