Dear Forest Service:

Thank you for accepting this scoping comment in support of the Forest Service's proposed amendment to the Northwest Forest Plan (NFP). The forests of the NFP region are vital to our region, providing cold, clean water for people and wildlife, inspiring places for contemplation and recreation, older forests home to rare species, climate change mitigation, and job opportunities.

In modernizing the NFP, it is crucial that we ensure that these ecosystem services continue to flow from our national forests and that they are able to adapt to a changing climate. Here are key considerations for the changes to the NFP:

First, the amendment must protect and conserve mature and old growth trees and forests in both moist and seasonally dry forests. Taking into consideration that old trees create a danger in and of themselves. Old and diseased trees must be dealt with, fire mitigation and controlled burns must be used to reduce fire danger. In residential areas, Firewise practices have been very successful!

Second, the amendment must recognize and address the effects of climate change, particularly the increase in very large and severe wildfires. While the NFP considers the essential role that wildfire plays in our forests, the size and severity of wildfires has far exceeded expectations. The amendment should reassess the conservation strategies for both moist and seasonally dry forests, considering the evolving role of wildfire and incorporating Indigenous and cultural burning practices. Consulting with regional Tribes is crucial.

The NFP amendment should bolster efforts to recover wildlife, recognizing the ongoing threat of climate change and past management practices. To protect biodiversity in the era of climate change, the amendment must ensure habitat resilience from disturbances such as wildfire, drought, disease, and insects.

Finally, the amendment should recognize shifts in our region's socioeconomic landscape since 1994. While forest management will always be a part of the Pacific Northwest economy, recreation and other pursuits now draw more people to our region than ever before. Building a modern forest restoration workforce will contribute to ecological resilience of our National Forests and ensure continued public enjoyment of these lands we all value.

Cabin owners and recreational opportunities can play a cooperative partnership with forest maintenance practices and should and could be an integral partner in these endeavors.

Thank you for this opportunity to provide comments on the Forest Service's proposed amendment.

Sincerely,
Sally Mackey
