Comments: I am very concerned about NSF plans to renew 62 backcountry guide permits in the Bob Marshall system with less oversight and guide related infrastructure and location information available to the public. I am especially opposed to renewing these permits with the proposed CE rather than the now required much more comprehensive and protective environmental review. Usage particularly higher impact use of the backcountry via guide services are providing more "amenities" and heavier usage of trails, campsites, etc. This is a concern. We Americans have demanded more than the backpackers of my youth. We are "loving" our wilderness areas to their detriment and degradation. Please do NOT weaken permitting standards. Keep our wilderness areas wild and untrampled.
