Comments: As a longtime seasonal user of the trail system in and around Telluride, I fully support the proposed addition and rehab of the trails listed. The ability to increase the quality of trails improves their sustainability with the growing use of the trail systems in the area. The projected trails on the east and west sides of Telluride will improve access to open areas and improve the safety of the local traffic to and from the established trail systems. Thank you for the consideration and the potential improvement to the overall system of trails.
