Comments: My concern is the toxic nature of the insecticide being used as it is very toxic to bees fish and wild life. The neighborhood I live in along with 40 other homes is surrounded by the WMNF. We have many small streams as well as Mill brook running through this neighborhood which would be prone to insecticide leaching in its waters. I understand the impotence of the health of the trees but question the collateral damage to wild life and human beings. Thornton NH is 50% WMNF which would expose over 2000 homes to this toxicity.
