Comments: Water use is one of my objections, as we are in a long term drought and all the residents around here have to be careful of water usage so their wells don't run dry. Here are some more facts to consider:

The average fracking job uses roughly 4 million gallons of water per well - or about as much water as New York City uses every six minutes and about 1.3 ...

How Much Water Does Hydraulic Fracturing Use?

API.org

Fracking a single oil or gas well can now use as much as 40 million gallons of water or more.
