Title:

Comments: The public's land that is leased should not be destroyed and/or permanently altered or made so expensive with improvements it prices the community out.

That is if it is Whitebark Pine that can live a thousand years or rock that will not grow back.

The public land should not be made so only the rich and famous can enjoy something that we have been enjoying as is with no changes for decades. The Forest service should not be condoning and going along making it out reach for the community while at the same time destroying the environment.
