Comments: Hello all,

Things that work and aren't broken only need maintenance. We don't go in and change systems that work. I understand that these changes are similar to zoning, in that, they are for future planning. FS doesn't need to change much of anything. Maybe open up some areas that were closed in the past, but other than that, what's there is working. We don't need to sell any of the land, we have enough wilderness areas, and we're getting decent income from the public for services.

Also, proposing these actions without a numbered map isn't a very clear way of asking the public for opinions on proposed changes. Seems somewhat shady.

Again, don't change what is working unless it is to open back up places to people.
