Title:

Comments: Wilderness is defined as a region that has not been significantly affected by humans. Cabins certainly are a significant alteration to what should be wilderness. The fact that cabins were allowed does not mean they should stay there forever. The U.S. Forest Service must not change its policy, and must phase out ANILCA cabins, as was the original plan. The toleration of these cabins was intended to be short term, and that term is coming to a close.
