Comments: I am writing to oppose to the draft Environmental Analysis in the Helena-Lewis and Clark National Forest. I believe that the proposed level of analysis is not adequate for a plan that could impact millions of acres of land, including sensitive places like the Badger-Two Medicine, where I call home.

The Forest Service should initiate a full Environmental Impact Statement. Additionally, the Blackfeet Nation should be consulted in any decisions that might affect the Badger-Two Medicine.

The Forest Service should either prohibit or provide much stronger guidance for fuel treatments that could occur in sensitive wildlands including the Badger-Two Medicine, roadless areas and recommended Wilderness.

Thank you for your consideration.
