Comments: Thank you for preparing such a comprehensive document.

I did not thoroughly read the whole document however I have three comments.

1. Page 25 discusses use of e-bikes on the trail. I strongly oppose use of any means of power other than human or use of stock. I think the text could expanded the definition on non-motorized to state the same. Today it is e-bikes but what is coming down the road: solar power, hydrogen power, compressed gasses, or whatever.
2. The document should include the Federal policy of trail etiquette and safety relating to the interaction of hikers, bikers, and horseman (stock). I have backpacked the AZT and portions of the CT and have experienced some problems.
3. Document states GIS data is made available to the public but I was unable to find how to find any reference on how to access it.

Again thank you for all the effort into preparing this document.
