Title:

Comments: I am in complete support of this project. The forest floor is currently overloaded with blowdown to the point that it is not even passable in many instances. Anything that is done to reduce the fuel load that currently exists is a win for healthy forests.

I am also in favor of any and all projects that can decrease the silt and livestock manure runoff into Slate creek and the Little Blackfoot River. The Little Blackfoot is a treasure and an important breeding river fishery. Keeping it clean needs to be a high priority. Slate creek seems to be a major contributor of silt and livestock runoff in the upper river from my observations. Cattle are frequently seen walking in the Little Blackfoot later in the summer and fall.
