Comments: As noted on page 35 of the EA, concerning invasive plants: "Following trail route establishment, there will be longer term effects of weed spread due to potential increased trail use." The plan considers how to mitigate invasive species spread during construction efforts.

An item not included in the plan is how trail users can help control weed spread by only using weed-free hay during their trail use. To help implement this policy (which probably already exists) the Forest Service could install signage noting this policy at Corral Flats, and possible at other key junctions on the trail network.
