Comments: On pages 32-33, Section 3.1: Resource effects of herbicide use of Triclopyr .

The Epa has not classified Triclopyr as a carcinogen to human. Animal evidence is not sufficient to list it, nor could they rule it out.

Science Direct says that stem treatment of Triclopyr should not be used on trees with frozen ground or in standing water. It is most useful when plants have only 1-2 stems and are only up to 8 feet high.

How does that recommendation fit with the treatment of trees in a swampy area that are multi stemmed and taller than 8 feet?
