Title:

Comments: We have County, State and Federal Foresters that are well schooled in BFP's and silviculture they should be making the decisions, without ANY political agenda, regarding what is best for THE FOREST and habitat it supports.

The single issue folks ie: No cutters, carbon crackpots, motor driven road and trail people most of whom are ignorant of Silviculture etc. should have no seat at the table. It should be about harvesting a renewable natural resource determined by the needs of the Forest to continue its vibrant health and provide humanity with flora and fauna.
