Title:

Comments: Reduce winter motorized use on trails frequented on foot or by other human powered traffic i.e. forest roads along the highway 12 corridor such as those surrounding Crystal Amphitheater.

Increase efforts to improve/restore degraded headwater streams that are known sources of potential hydrologic resilience for aquatic ecological communities as well as downstream water users. Also, increase funds and timelines for long term monitoring and maintenance of existing and future improvements/restoration on headwater streams to ensure their long term efficacy and utility.
