Comments: To: US Forest Service

Please don't cut ANY TREES or construct ANY ROADS in Vermont!!!! Vermont, with all of its severe flooding over the recent past, needs MORE TREES and FEWER ROADS, to help build and hold the soil, be a moisture "sponge", and prevent and mitigate erosion! Also, the value of true old-growth trees and forest lands is priceless, and even 150 native hardwoods and softwoods in the northeastern US are not truly old-growth! They must reach 300+ years of age and be dying of old age, having seeded many generations (possibly) to really reach their genetic potential and fruition!
