Comments: I am writing regarding the proposed update for the Rattlesnake Recreation Area, and I keep seeing the terms semi primitive motorized and semi primitive non-motorized, without any explanation or examples of each. The updated map proposal shows the main corridor as semi primitive motorized. Until now there have been no motorized vehicles anywhere in the wilderness, unless they are official Forest Service vehicles. If the new proposal implies that the public can bring in motorized vehicles of any kind, I voice my strong opposition. Such action could completely change the nature of the Rec area and the public's experience for the worse. But I find it difficult and confusing that there is nowhere to be found a definition and/or example of such vehicles. As a concerned citizen, I would like an explanation before you move forward with this proposal.
