Comments: I am writing to request that the Lolo National Forest Management Plan Revision process consider approaches ("Alternatives") that maintain groomed Nordic skiing trails in the presence of the effects of global warming. Global warming has led to decreased annual snowfall amounts in some areas with increased amounts in others. Most Nordic skiing requires groomed trails and the lack of snow during the 2023-2024 winter eliminated much of the local areas for Nordic Skiing. I encourage the Forest Service to work with the Missoula Nordic Ski Club to identify areas that have more reliable snow amounts (e.g., higher elevation areas) that are amenable to constructing climate-resilient groomed ski trails to maintain these important recreational resources.
