Comments: Dear US Forest Service,

I believe using fire in a prescribed burn in the Sandia Mountains is a bad idea because historically, prescribed burns do not do well in New Mexico for three reasons: 1) low humidity; 2) high winds; 3) winds that change direction. Just last year there was a very large burn scar in New Mexico caused by a prescribed burn that harmed a lot of people.

Additionally, in addition to the prescribed burn potentially getting out of control, it also will contribute to poor air quality in the Albuquerque area which is already suffering from pollution and pollen counts. Additional smoke is detrimental to people's health in the Albuquerque area.

Thank you for your kind consideration.

Respectfully,

Lee Henderson
