First name: Diane

Last name: Brown

Organization:

Title:

Comments: There is no replacing old growth forests. There is no replacing the plant and animal species (including our own) whose survival ultimately depends upon the flow of life and, in particular, trees, shrubs and contiguous forestland. There is no science, no data, no "educated opinion," and no technology that will replace the deep intelligence of the natural order of life of this planet.

The taking of 13,000 acres for the benefit of the few will negatively impact the lives of the many, FOREVER.
